Hanwha Techwin Wisenet 5 Technology

Drives New Benchmarks in IP Camera Performance

*Core Chipset and Processing Technology Provides Industry High 150dB WDR,
Improved Compression and Extensive Portfolio of Features*

Las Vegas, NV (April 5, 2017) – Hanwha Techwin America is featuring its new Wisenet 5 Chipset and Processing Technology here at ISC West (booth #14079). Developed exclusively for professional security applications, Wisenet 5 is the most significant core technology developed by Hanwha Techwin, and at the heart of the unparalleled performance and capabilities of the company's recently introduced Wisenet X Series surveillance solutions. Wisenet 5 technology sets new benchmarks for surveillance performance, functionality and intelligence at the edge.

“The introduction of Hanwha’s Wisenet 5 Chipset and Processing Technology far exceeds the significance of any product introduction we have made to date,” said Miguel Lazatin, Director, Product and Channel Marketing, Hanwha Techwin America. “Wisenet 5 sets the benchmark for a much higher level of professional surveillance performance that will impact and improve the entire Hanwha surveillance offering moving forward.”

Wisenet 5 technology provides an industry-leading 150dB Wide Dynamic Range (WDR), exceptionally clear images in extreme low and challenging light conditions, and better compression and data transfer performance via Hanwha’s embedded WiseStream II technology. Wisenet 5 technology’s advanced processing also supports a host of advanced features including: license-free audio and video analytics; a USB port for easy lens focus and viewing angle adjustments directly from a mobile device via Wi-Fi, dual SD card slots for increased on-board storage, and advanced image stabilization using a gyro sensor.

Hanwha continues to actively pursue new and innovative core technologies to further improve the performance of their surveillance solutions ranging from new optical lens design, to SoC development and deep learning with advanced analytics.
