## **Hanwha Techwin Releases New P series Multi-directional Cameras at GSX 2018**

*Flexible, on-site configurations with customizable fixed-focus lens/CMOS sensor modules*

**Teaneck, NJ, August 16, 2018** - At GSX 2018, in booth #2341, [Hanwha Techwin America](#), a global supplier of IP and analog video surveillance solutions, will unveil two new cameras in its P series line. The Wisenet PNM-9000VQ (4-head) multi-directional camera and the PNM-9320VQP (4-head) multi-directional plus 32x optical zoom PTZ camera support configurable fixed-focus lens/CMOS sensor modules that allow the installer to choose the resolution and the focal length for each head.

Ideally suited for city surveillance, stadiums, and airports, the new cameras allow for individual on-screen displays and a full suite of video analytics including loitering, directional detection, fog detection, tampering, motion detection, and objects entering or exiting an area. Hallway view aspect ratios are also supported for the monitoring of vertical shaped areas.

The PNM-9320VQP and PNM-9000VQ feature a configurable four head multi-sensor

array that can accept a choice of 2MP modules with optional 2.8, 3.6, 6 or 12mm lenses or 5MP modules with optional 3.7, 4.6 and 7mm lenses in any combination to suit the unique requirements of any job. Additionally, the PNM-9320VPQ has a 2MP HD (4.44-142.6mm) PTZ sensor capable of 32x optical zoom to provide additional clarity in any direction.

"Never before has so much power and flexibility been available in a multi-directional camera," said Paul Kong, Technical Director, Hanwha Techwin. "With high frame-rates (60/30fps) per sensor, true 150dB WDR (Wide Dynamic Range), H.265 WiseStream II compression technology and a powerful suite of analytics built in, the cameras are unique in their capabilities. Our latest cameras are re-defining the multi-sensor market once again."

Utilizing a single IP address over one cat5 cable requires only one VMS license further reducing the cost to install, service, and support. Powerful multi-streaming performance adds further flexibility to route streams to multiple destinations at different resolutions.
