Hanwha Techwin Releases New X Plus Series Cameras at GSX 2018

*Modular structure for fastest installation and servicing plus audio message playback,
increased tilt range, and removable color skins*

Teaneck, NJ, September 13, 2018 - At GSX 2018, in booth #2341, [Hanwha Techwin America](#), a global supplier of IP and analog video surveillance solutions, will unveil the new Wisenet X Plus camera line. With a focus on modular design, the X Plus series is one of the fastest cameras to install, service, and upgrade saving installers time and money. X Plus cameras also feature in-camera audio messaging playback, extended temperature handling, removable color skins, and PTRZ (pan, tilt, rotate, zoom) for ultimate flexibility.

"The X Plus series combines the best of Hanwha Techwin X series technology with the convenience of complete modular design," said Paul Kong, Technical Director, Hanwha Techwin. "X Plus series cameras utilize magnets to lock sensor modules into the housing for instant configuration. Electricians can run conduit with a single PoE

(Power over Ethernet) connection to the housing or backplate, without the camera module, allowing security professionals to snap the camera into place after the job site is clean in just minutes."

Camera modules are available with options such as PTRZ, IR, and a heater. Housing choices includes indoor, outdoor, and a new compact plenum-rated flush mount. Removable skin covers available in white, black, and ivory allow easy changing of colors to blend in the décor of the room. Custom painting is also made easy since the skin easily separates from the camera.

New features enable pre-recorded audio messages to be triggered from in-camera analytics. These messages are played out of the camera's audio out connection. The audio files are stored locally on the camera's SD card.

Additional highlighted features:

- Increased operating temperatures is from -58° to 140°F (-50° to 60° C)
- Tilt angles increased to 85 degrees for wider coverage with low ceilings
- PTRZ enables view changes remotely simplifying installation and additional adjustments
- New gyro sensors provide shock detection
