## Hanwha To Showcase Latest Cameras and New version of WAVE VMS at ISC West 2019

*Focus on modular, easy to install, high-resolution cameras plus advanced analytic support in V4  
of Wisenet WAVE VMS*

**Teaneck, NJ, February 4th, 2019** - At ISC West 2019, in booth #14079, [Hanwha Techwin America](#), a global supplier of IP and analog video surveillance solutions, will showcase version 4.0 of its Wisenet WAVE VMS solution along with new features and functionality across several Wisenet camera lines. Focusing on ease of installation, the new, highly modular Wisenet X series Plus cameras will be shipping at the show. Attendees will also be able to see the affordable new 5MP Q series cameras and the latest XRN / QRN NVRs supporting instant configuration of mobile phone monitoring via QR Codes.

### Wisenet WAVE 4.0

The Wisenet WAVE VMS has seen significant development since its introduction last year.

Designed to support the advanced features and onboard analytics that are unique to Hanwha cameras, it is ideally suited to meet the needs of customers looking for reasonably priced, easy to use, end-to-end video surveillance solutions. Version 4 adds support for Q series NVRs with integrated PoE, improved PTZ support & functionality on NVRs and SPE encoders, additional in-camera analytic functions including queue management, shock detection, and temperature change detection (for thermal cameras) as well as sound classification and descriptive alerts for events like explosions, glass breaking, gunshots, and screams. System scalability has been enhanced to support more servers, devices and users. Additionally, a new metadata SDK allows the rapid integration of object metadata (coordinates, tags) generated by 3rd party computer vision applications. This allows for the integration of several functions including the ability to overlay bounding boxes and object paths within video tiles, as well as integrate custom actions and events.

### **Wisenet X series Plus**

With a focus on modular design, the Wisenet X series Plus is one of the easiest cameras to install, service and upgrade saving installers time and money. X series Plus cameras utilize magnets to lock sensor modules into the housing for instant configuration. Electricians can run conduit with a single PoE connection to the housing or backplate, without the camera module, allowing security professionals to snap the camera into place after the job site is clean in just minutes. X Plus cameras feature extended temperature handling, increased tilt angle, removable color skins, and PTRZ (pan, tilt, rotate, zoom) for ultimate flexibility. Pre-recorded audio messages and warnings can be triggered by in-camera analytics and played out directly from the cameras. The X series Plus cameras will be shipping at ISC West.

### **5MP Q series**

The Q series camera line has been enhanced with 5MP resolution at up to 30fps, representing a highly affordable entry price-point without sacrificing essential features and performance. For ease of installation, an onboard CVBS output enables installers to connect a portable analog monitor directly when making precise adjustments at the camera location. Featuring true WDR and a motorized vari-focal lens, Q series cameras also support H.265 and WiseStream II compression technology, keeping bandwidth and storage requirements to a minimum.

### **XRN / QRN NVRs**

Enhancements to XRN and QRN NVRs include a new Smart Search feature. Easy remote monitoring access via mobile app is configured instantly via QR code scanning without the need to configure DNS settings or port forwarding. XRN and QRN NVRs support H.265 recording for the most efficient media storage with select models support built-in PoE / PoE+ ports negating the need for a dedicated PoE switch.
