## Hanwha X series Plus Shipping at ISC West 2019

*Modular, easy to install, high-resolution cameras designed to save integrators time and money*

**Teaneck, NJ, February 28th, 2019** - [Hanwha Techwin America](#), a global supplier of IP and analog video surveillance solutions, today announced that the new Wisenet X series Plus camera line will be shipping at ISC West 2019. Focusing on ease of installation, the new, highly modular X series Plus is one of the easiest cameras to install, service and upgrade saving installers time and money.

Available in either 2 or 5MP indoor or outdoor configurations, X series Plus cameras utilize magnets to lock sensor modules into the housing for instant snap-in installation. Electricians can run conduit with a single PoE connection to the mounting plate without the camera base, module, and top cover. This allows security professionals to snap the camera and covers into place after the job site is clean in just minutes.

"Made with integrators in mind, our new easy-access packaging lets installers configure

cameras without taking them out of the box," said Paul Kong, CTO, Hanwha Techwin America. "We have separated the housing and module containers, enabling installers to directly access the RJ-45 jack resulting in many hours of configuration time saved during larger installations."

Camera modules are available with options such as PTRZ, IR and a heater. Designed to save time and money by not requiring a trip to the camera location when fine-tuning, the PTRZ option allows modifications to the camera's position after installation is complete. Housing choices include indoor, outdoor and a new compact plenum-rated flush mount. Removable skin covers are available in white, black and ivory and allow easy changing of colors to blend into the décor of the room. Custom painting is also made easy since the skins easily separate from the camera.

New features enable pre-recorded audio messages to be triggered by in-camera analytics. The audio files are played out from the camera's audio output connection.

### **Additional highlighted features**

- Based on Wisenet 5 proprietary chipset for advanced performance, built-in analytics and enhanced cyber security.
- Increased operating temperatures from -58° to 140°F (-50° to 60° C)
- Tilt angles increased to 85v degrees for wider coverage with low ceilings
- Outdoor vandal dome configurations support up to IP6K9K and IK10+ ratings
- New gyro sensors provide shock detection
